From challenge to action -

ARCADE & ERTRAC Joint Stakeholder Workshop

13 February 2020

ERTICO – ITS Europe

Louisa Avenue 326

1050 Brussels (BE)

We would like to invite you to our next Stakeholder workshop of [ARCADE](#) Joint Connected and Automated Driving (CAD) Network and ERTRAC Working Group on “Connectivity and Automated Driving”, which will be held in Brussels, Belgium, on 13 February 2020.

After our events in February and April 2019, in which we have been working together with stakeholders and experts from the Joint CAD Network on benefits, challenges and bottlenecks of automated driving: *what is the road ahead?*

In its [consolidated roadmap](#), ARCADE has defined a number of actions for the different thematic areas (together with application specific priorities) at technical, systems & services and societal levels. For this third workshop, we propose to adopt an action-oriented approach and further explore these key priorities identified in interactive working sessions.

The workshop is targeted (though not limited to) stakeholders from industry, scientific research, policy makers, public and road authorities, user associations and others with an interest in Connected and Automated Driving.

Further information, including draft agenda and registration details (this workshop is free of charge), is available from <https://connectedautomateddriving.eu/event/3rd-stakeholder-workshop-of-the-joint-cad-network/>

So stay tuned and follow us:
