Work Package Structure

Project's Concept

- ① Integration of positioning, communications and cyber-security in CAD test scenarios
- ② Comprehensive procedure for the allocation of test cases per testing platform
- ③ Selection criteria and specification for proving ground test scenarios taking into account criticality
- ④ Proving ground testing and evaluation
- ⑤ Correlation between simulation and proving ground results
- ⑥ Harmonised, open result compilation and sharing
- ⑦ Field trial test methodology description
- ⑧ Cyber-security principles and integration in the testing methodology

Project's Objectives

HEADSTART will define testing and validation procedures of CAD functions including:

- its key enabling technologies (i.e. communication, cyber-security, positioning)
- by cross-linking of all test instances such as simulation, proving ground and real world field tests
- to validate safety and security performance according to the needs of key user groups (technology developers, consumer testing and type approval)
